On-premises CVE Mitigations	2
On-premises v2.4.2 CVE Mitigations	3
On-premises v2.3.3 CVE Mitigations	14
On-premises v2.3 CVE Mitigations	17
On-premises v2.2.5 CVE Mitigations	22

On-premises CVE Mitigations

Codefresh continuously addresses security concerns and implements vulnerability fixes for our On-premises versions.

This document focuses on and serves as a reference for Common Vulnerabilities and Exposures (CVEs) with mitigations.

The CVEs are categorized by each on-premises version, starting with V2.2.5. They are organized in tables by Image name, CVE ID, Image Version and Mitigation. The tables are sorted by the Image names.

The document is updated per on-premises patch to ensure that you stay informed about the specific CVE mitigations relevant to your Codefresh on-premises installation. Every Image includes the Published On date identifying the date of the most recent update.

On-premises v2.4.2 CVE Mitigations

Version 2.4.2			
Image	CVE ID	Image Version	Mitigation
codefresh/cf-api <i>Published on:</i> July 5 2024	CVE-2021-3377	21.253.43	The attacker cannot inject an XSS vulnerability into the logs due to our input validation. The only possible avenue for such an attack is to invoke an external service through a Codefresh step in the pipeline, which could potentially introduce HTML content into the logs. However, even in this scenario, Codefresh utilizes this library exclusively when a customer attempts to download logs in HTML format. This is distinct from the Codefresh logs viewer and is unrelated to it.
codefresh/cf-api <i>Published on:</i> July 5 2024	CVE-2020-36604	21.253.43	Risk assessment confirms Hoek vulnerability which is unused and does not pose an immediate threat. An update is scheduled for the next update cycle following a full review and thorough testing.
codefresh/cf-api <i>Published on:</i> July 5 2024	CVE-2023-42364	21.253.43	Service mitigates potential vulnerabilities by not accepting and utilizing user input in operations involving text files and the AWK utility. This approach minimizes risks associated with external data manipulation, ensuring a more secure handling of file operations within our Node.js environment.
codefresh/cf-api <i>Published on:</i> July 5 2024	CVE-2023-42365	21.253.43	Service mitigates potential vulnerabilities by not accepting and utilizing user input in operations involving text files and the AWK utility. This approach minimizes risks associated with external data manipulation, ensuring a more secure handling of file operations within our Node.js environment.

Version 2.4.2

Image	CVE ID	Image Version	Mitigation
codefresh/cf-broadcaster <i>Published on:</i> July 5 2024	CVE-2023-42363	1.12.14	The vulnerability affecting the <i>xasprintf</i> function in BusyBox does not impact the security of environments using Node.js, provided BusyBox is not used directly in those environments.
codefresh/cf-broadcaster <i>Published on:</i> July 5 2024	CVE-2020-36604	1.12.14	Risk assessment confirms Hoek vulnerability which is unused and does not pose an immediate threat. An update is scheduled for the next update cycle following a full review and thorough testing.
codefresh/cf-broadcaster <i>Published on:</i> July 5 2024	CVE-2023-42365	1.12.14	Service mitigates potential vulnerabilities by not accepting and utilizing user input in operations involving text files and the AWK utility. This approach minimizes risks associated with external data manipulation, ensuring a more secure handling of file operations within our Node.js environment.
codefresh/cf-broadcaster <i>Published on:</i> July 5 2024	CVE-2023-42366	1.12.14	Service mitigates potential vulnerabilities by not accepting and utilizing user input in operations involving text files and the AWK utility. This approach minimizes risks associated with external data manipulation, ensuring a more secure handling of file operations within our Node.js environment.
codefresh/cf-broadcaster <i>Published on:</i> July 5 2024	CVE-2023-42364	1.12.14	Service mitigates potential vulnerabilities by not accepting and utilizing user input in operations involving text files and the AWK utility. This approach minimizes risks associated with external data manipulation, ensuring a more secure handling of file operations within our Node.js environment.
codefresh/cf-platform-analytics <i>Published on:</i> July 5 2024	CVE-2020-36604	0.49.48	Risk assessment confirms Hoek vulnerability which is unused and does not pose an immediate threat. An update is scheduled for the next update cycle following a full review and thorough testing.

Version 2.4.2

Image	CVE ID	Image Version	Mitigation
codefresh/cf-platform-analytics <i>Published on:</i> July 5 2024	CVE-2023-42363	0.49.48	The vulnerability affecting the <i>xasprintf</i> function in BusyBox does not impact the security of environments using Node.js, provided BusyBox is not used directly in those environments.
codefresh/cf-platform-analytics <i>Published on:</i> July 5 2024	CVE-2023-42364	0.49.48	Service mitigates potential vulnerabilities by not accepting and utilizing user input in operations involving text files and the AWK utility. This approach minimizes risks associated with external data manipulation, ensuring a more secure handling of file operations within our Node.js environment.
codefresh/cf-platform-analytics <i>Published on:</i> July 5 2024	CVE-2023-42365	0.49.48	Service mitigates potential vulnerabilities by not accepting and utilizing user input in operations involving text files and the AWK utility. This approach minimizes risks associated with external data manipulation, ensuring a more secure handling of file operations within our Node.js environment.
codefresh/cf-platform-analytics <i>Published on:</i> July 5 2024	CVE-2024-27088	0.49.48	Our approach mitigates the vulnerability by enforcing simplified function naming conventions and prioritizing updated dependencies to prevent script stalls caused by complex function declarations.
codefresh/cf-platform-analytics <i>Published on:</i> July 5 2024	CVE-2023-50709	0.49.48	Codefresh does not directly expose Cube API to the internet. We use a separate express.js server that uses the logic from cube.js to process the requests.
codefresh/cf-ui <i>Published on:</i> July 5 2024	CVE-2023-42365	14.94.77	Service mitigates potential vulnerabilities by not accepting and utilizing user input in operations involving text files and the AWK utility. This approach minimizes risks associated with external data manipulation, ensuring a more secure handling of file operations within our Node.js environment.

Version 2.4.2

Image	CVE ID	Image Version	Mitigation
codefresh/cf-ui <i>Published on:</i> July 5 2024	CVE-2023-42364	14.94.77	Service mitigates potential vulnerabilities by not accepting and utilizing user input in operations involving text files and the AWK utility. This approach minimizes risks associated with external data manipulation, ensuring a more secure handling of file operations within our Node.js environment.
codefresh/charts-manger <i>Published on:</i> July 5 2024	CVE-2020-36604	1.17.2	Risk assessment confirms Hoek vulnerability which is unused and does not pose an immediate threat. An update is scheduled for the next update cycle following a full review and thorough testing.
codefresh/charts-manger <i>Published on:</i> July 5 2024	CVE-2023-42365	1.17.2	Service mitigates potential vulnerabilities by not accepting and utilizing user input in operations involving text files and the AWK utility. This approach minimizes risks associated with external data manipulation, ensuring a more secure handling of file operations within our Node.js environment.
codefresh/charts-manger <i>Published on:</i> July 5 2024	CVE-2023-42364	1.17.2	Service mitigates potential vulnerabilities by not accepting and utilizing user input in operations involving text files and the AWK utility. This approach minimizes risks associated with external data manipulation, ensuring a more secure handling of file operations within our Node.js environment.
codefresh/cluster-providers <i>Published on:</i> July 5 2024	CVE-2023-42364	1.17.7	Service mitigates potential vulnerabilities by not accepting and utilizing user input in operations involving text files and the AWK utility. This approach minimizes risks associated with external data manipulation, ensuring a more secure handling of file operations within our Node.js environment.

Version 2.4.2

Image	CVE ID	Image Version	Mitigation
codefresh/cluster-providers <i>Published on:</i> July 5 2024	CVE-2023-42365	1.17.7	Service mitigates potential vulnerabilities by not accepting and utilizing user input in operations involving text files and the AWK utility. This approach minimizes risks associated with external data manipulation, ensuring a more secure handling of file operations within our Node.js environment.
codefresh/cluster-providers <i>Published on:</i> July 5 2024	CVE-2023-42363	1.17.7	The vulnerability affecting the <code>xasprintf</code> function in BusyBox does not impact the security of environments using Node.js, provided BusyBox is not used directly in those environments.
codefresh/cluster-providers <i>Published on:</i> July 5 2024	CVE-2023-42366	1.17.7	Service mitigates potential vulnerabilities by not accepting and utilizing user input in operations involving text files and the AWK utility. This approach minimizes risks associated with external data manipulation, ensuring a more secure handling of file operations within our Node.js environment.
codefresh/consul <i>Published on:</i> July 5 2024	PRISMA-2023-0056	1.19.0-debian-12-r2	Latest upstream version.
codefresh/context-manager <i>Published on:</i> July 5 2024	CVE-2020-36604	2.29.4	Risk assessment confirms Hoek vulnerability which is unused and does not pose an immediate threat. An update is scheduled for the next update cycle following a full review and thorough testing.
codefresh/context-manager <i>Published on:</i> July 5 2024	CVE-2023-42364	2.29.4	Service mitigates potential vulnerabilities by not accepting and utilizing user input in operations involving text files and the AWK utility. This approach minimizes risks associated with external data manipulation, ensuring a more secure handling of file operations within our Node.js environment.

Version 2.4.2

codefresh/context-manager <i>Published on:</i> July 5 2024	CVE-2023-42365	2.29.4	Service mitigates potential vulnerabilities by not accepting and utilizing user input in operations involving text files and the AWK utility. This approach minimizes risks associated with external data manipulation, ensuring a more secure handling of file operations within our Node.js environment.
codefresh/docker <i>Published on:</i> July 5 2024	CVE-2023-42363	27.0-dind	Latest upstream version.
codefresh/docker <i>Published on:</i> July 5 2024	CVE-2023-42365	27.0-dind	Latest upstream version.
codefresh/docker <i>Published on:</i> July 5 2024	CVE-2023-42366	27.0-dind	Latest upstream version.
codefresh/gitops-dash board-manager <i>Published on:</i> July 5 2024	CVE-2020-36604	1.14.13	Risk assessment confirms Hoek vulnerability which is unused and does not pose an immediate threat. An update is scheduled for the next update cycle following a full review and thorough testing.
codefresh/gitops-dash board-manager <i>Published on:</i> July 5 2024	CVE-2023-42366	1.14.13	Service mitigates potential vulnerabilities by not accepting and utilizing user input in operations involving text files and the AWK utility. This approach minimizes risks associated with external data manipulation, ensuring a more secure handling of file operations within our Node.js environment.

Version 2.4.2

Image	CVE ID	Image Version	Mitigation
codefresh/gitops-dash board-manager <i>Published on: July 5 2024</i>	CVE-2023-42365	1.14.13	Service mitigates potential vulnerabilities by not accepting and utilizing user input in operations involving text files and the AWK utility. This approach minimizes risks associated with external data manipulation, ensuring a more secure handling of file operations within our Node.js environment.
codefresh/gitops-dash board-manager <i>Published on: July 5 2024</i>	CVE-2023-42364	1.14.13	Service mitigates potential vulnerabilities by not accepting and utilizing user input in operations involving text files and the AWK utility. This approach minimizes risks associated with external data manipulation, ensuring a more secure handling of file operations within our Node.js environment.
codefresh/gitops-dash board-manager <i>Published on: July 5 2024</i>	CVE-2023-42363	1.14.13	The vulnerability affecting the <code>xasprintf</code> function in BusyBox does not impact the security of environments using Node.js, provided BusyBox is not used directly in those environments.
codefresh/kube-integr ation <i>Published on: July 5 2024</i>	CVE-2023-42366	1.31.8	Service mitigates potential vulnerabilities by not accepting and utilizing user input in operations involving text files and the AWK utility. This approach minimizes risks associated with external data manipulation, ensuring a more secure handling of file operations within our Node.js environment.
codefresh/kube-integr ation <i>Published on: July 5 2024</i>	CVE-2023-42365	1.31.8	Service mitigates potential vulnerabilities by not accepting and utilizing user input in operations involving text files and the AWK utility. This approach minimizes risks associated with external data manipulation, ensuring a more secure handling of file operations within our Node.js environment.

Version 2.4.2

Image	CVE ID	Image Version	Mitigation
codefresh/kube-integration <i>Published on:</i> July 5 2024	CVE-2023-42364	1.31.8	Service mitigates potential vulnerabilities by not accepting and utilizing user input in operations involving text files and the AWK utility. This approach minimizes risks associated with external data manipulation, ensuring a more secure handling of file operations within our Node.js environment.
codefresh/kube-integration <i>Published on:</i> July 5 2024	CVE-2023-42363	1.31.8	The vulnerability affecting the <code>xasprintf</code> function in BusyBox does not impact the security of environments using Node.js, provided BusyBox is not used directly in those environments.
codefresh/nginx-unprivileged <i>Published on:</i> July 5 2024	CVE-2023-42366	1.25-alpine	Service mitigates potential vulnerabilities by not accepting and utilizing user input in operations involving text files and the AWK utility. This approach minimizes risks associated with external data manipulation, ensuring a more secure handling of file operations within our Node.js environment.
codefresh/nginx-unprivileged <i>Published on:</i> July 5 2024	CVE-2023-42365	1.25-alpine	Service mitigates potential vulnerabilities by not accepting and utilizing user input in operations involving text files and the AWK utility. This approach minimizes risks associated with external data manipulation, ensuring a more secure handling of file operations within our Node.js environment.
codefresh/nginx-unprivileged <i>Published on:</i> July 5 2024	CVE-2023-42364	1.25-alpine	Service mitigates potential vulnerabilities by not accepting and utilizing user input in operations involving text files and the AWK utility. This approach minimizes risks associated with external data manipulation, ensuring a more secure handling of file operations within our Node.js environment.

On-premises v2.3.3 CVE Mitigations

Version 2.3.3			
Image	CVE ID	Image Version	Mitigation
codefresh/cf-api <i>Published on:</i> May 28 2024	CVE-2021-3377	21.247.17	The attacker cannot inject an XSS vulnerability into the logs due to our input validation. The only possible avenue for such an attack is to invoke an external service through a Codefresh step in the pipeline, which could potentially introduce HTML content into the logs. However, even in this scenario, Codefresh utilizes this library exclusively when a customer attempts to download logs in HTML format. This is distinct from the Codefresh logs viewer and is unrelated to it.
codefresh/cf-api <i>Published on:</i> May 28 2024	CVE-2020-36604	21.247.15	Risk assessment confirms Hoek vulnerability which is unused and does not pose an immediate threat. An update is scheduled for the next update cycle following a full review and thorough testing.
codefresh/cf-broadcaster <i>Published on:</i> May 28 2024	CVE-2024-29041	1.12.10	Related to improperly formed URL redirects in the Express.js framework which does not affect our service. Since our service does not utilize any redirect mechanisms, the risk posed by this vulnerability is not applicable to our application, and therefore no measures are necessary.
codefresh/cf-broadcaster <i>Published on:</i> May 28 2024	CVE-2020-36604	1.12.10	Risk assessment confirms Hoek vulnerability which is unused and does not pose an immediate threat. An update is scheduled for the next update cycle following a full review and thorough testing.
codefresh/consul <i>Published on:</i> May 28 2024	PRISMA-2023-0056	1.18.0-debian-12-r0	Latest upstream version.

Version 2.3.3

Image	CVE ID	Image Version	Mitigation
codefresh/cf-platform-analytics <i>Published on:</i> May 28 2024	CVE-2020-36604	0.49.37	Risk assessment confirms Hoek vulnerability which is unused and does not pose an immediate threat. An update is scheduled for the next update cycle following a full review and thorough testing.
codefresh/cf-platform-analytics <i>Published on:</i> May 28 2024	CVE-2023-50709	0.49.37	Codefresh does not directly expose Cube API to the internet. We use a separate express.js server that uses the logic from cube.js to process the requests.
codefresh/cf-tls-sign <i>Published on:</i> May 28 2024	CVE-2023-42282	1.8.0	The 'ip' package is nested within the global NPM (Node Package Manager) repository. However, it remains unused for installing dependencies as we rely on yarn. Furthermore, it does not play a role in the service's runtime operations.
codefresh/cf-tls-sign <i>Published on:</i> May 28 2024	CVE-2024-28863	1.8.0	The tar package is on the third tier of dependencies in the cubejs-backend/api-gateway package. By not relying on user custom data input, the above mentioned NPM repository ensures that this specific vulnerability poses no threat to its functionality.
codefresh/charts-manager <i>Published on:</i> May 28 2024	CVE-2020-36604	1.16.12	Risk assessment confirms Hoek vulnerability which is unused and does not pose an immediate threat. An update is scheduled for the next update cycle following a full review and thorough testing.
codefresh/context-manager <i>Published on:</i> May 28 2024	CVE-2020-36604	2.26.13	Risk assessment confirms Hoek vulnerability which is unused and does not pose an immediate threat. An update is scheduled for the next update cycle following a full review and thorough testing.
codefresh/docker <i>Published on:</i> May 28 2024	CVE-2023-45288	26.0-dind	Latest upstream version.

Version 2.3.3

Image	CVE ID	Image Version	Mitigation
codefresh/gitops-dash board-manager <i>Published on:</i> May 28 2024	CVE-2020-36604	1.14.11	Risk assessment confirms Hoek vulnerability which is unused and does not pose an immediate threat. An update is scheduled for the next update cycle following a full review and thorough testing.
codefresh/pipeline-ma nager <i>Published on:</i> May 28 2024	CVE-2020-36604	3.132.4	Risk assessment confirms Hoek vulnerability which is unused and does not pose an immediate threat. An update is scheduled for the next update cycle following a full review and thorough testing.
codefresh/runtime-env ironment-manager <i>Published on:</i> May 28 2024	CVE-2020-36604	3.33.4	Risk assessment confirms Hoek vulnerability which is unused and does not pose an immediate threat. An update is scheduled for the next update cycle following a full review and thorough testing.
codefresh/tasker-kube rnetes <i>Published on:</i> May 28 2024	CVE-2020-36604	1.26.3	Risk assessment confirms Hoek vulnerability which is unused and does not pose an immediate threat. An update is scheduled for the next update cycle following a full review and thorough testing.
codefresh/tasker-kube rnetes <i>Published on:</i> May 28 2024	CVE-2024-29041	1.26.3	Related to improperly formed URL redirects in the Express.js framework which does not affect our service. Since our service does not utilize any redirect mechanisms, the risk posed by this vulnerability is not applicable to our application, and therefore no measures are necessary.

On-premises v2.3 CVE Mitigations

Version 2.3			
Image	CVE ID	Image Version	Mitigation
codefresh/argo-platform-abac <i>Published on:</i> March 28 2024	CVE-2023-26108	1.2577.0	The identified vulnerability is associated with the StreamableFile API. Codefresh does not utilize the StreamableFile API for returning files. Additionally, we do not allow downloading of files from our services.
codefresh/argo-platform-api-events <i>Published on:</i> March 28 2024	CVE-2023-26108	1.2577.0	The identified vulnerability is associated with the StreamableFile API. Codefresh does not utilize the StreamableFile API for returning files. Additionally, we do not allow downloading of files from our services.
codefresh/argo-platform-api-graphql <i>Published on:</i> March 28 2024	CVE-2023-26108	1.2577.0	The identified vulnerability is associated with the StreamableFile API. Codefresh does not utilize the StreamableFile API for returning files. Additionally, we do not allow downloading of files from our services.
codefresh/argo-platform-audit <i>Published on:</i> March 28 2024	CVE-2023-26108	1.2577.0	The identified vulnerability is associated with the StreamableFile API. Codefresh does not utilize the StreamableFile API for returning files. Additionally, we do not allow downloading of files from our services.
codefresh/argo-platform-analytics-reporter <i>Published on:</i> March 28 2024	CVE-2023-26108	1.2577.0	The identified vulnerability is associated with the StreamableFile API. Codefresh does not utilize the StreamableFile API for returning files. Additionally, we do not allow downloading of files from our services.
codefresh/argo-platform-cron-executor <i>Published on:</i> March 28 2024	CVE-2023-26108	1.2577.0	The identified vulnerability is associated with the StreamableFile API. Codefresh does not utilize the StreamableFile API for returning files. Additionally, we do not allow downloading of files from our services.

Version 2.3

Image	CVE ID	Image Version	Mitigation
codefresh/cluster-providers <i>Published on:</i> March 28 2024	CVE-2023-48795	1.17.1	The latest image scans by both Prisma Cloud and Docker Scout did not detect any vulnerabilities.
codefresh/consul <i>Published on:</i> March 28 2024	CVE-2023-0056	1.17.0-debian-11-r1	Latest upstream version.
codefresh/context-manager <i>Published on:</i> June 26 2024	CVE-2020-36604	2.26.13	Risk assessment confirms Hoek vulnerability which is unused and does not pose an immediate threat. An update is scheduled for the next update cycle following a full review and thorough testing.
codefresh/docker <i>Published on:</i> April 16 2024	CVE-2023-47108	25.0-dind	Docker daemon has a hidden /grpc endpoint not described in the documentation, containing an OpenTelemetry interceptor that gathers some metrics on it. Potentially excess usage of this endpoint can overflow the interceptor with metrics and bring the server down. However, for this you need to know which grpc method to use, which is not described in any public documentation. Furthermore, to access docker daemon via TCP in our setup, you require access to the SSL certificate stored in the secret. Only cf-builder and engine in Codefresh setup has access to this secret.
codefresh/gitops-dash-board-manager <i>Published on:</i> March 28 2024	CVE-2020-36604	1.14.8	Risk assessment confirms Hoek vulnerability which is unused and does not pose an immediate threat. An update is scheduled for the next update cycle following a full review and thorough testing.
codefresh/gitops-dash-board-manager <i>Published on:</i> March 28 2024	CVE-2023-48795	1.14.8	The latest image scans by both Prisma Cloud and Docker Scout did not detect any vulnerabilities.

codefresh/kube-integration <i>Published on:</i> March 28 2024	CVE-2023-48795	1.31.3	The latest image scans by both Prisma Cloud and Docker Scout did not detect any vulnerabilities.
codefresh/pipeline-manager <i>Published on:</i> March 28 2024	CVE-2020-36604	3.132.3	Risk assessment confirms Hoek vulnerability which is unused and does not pose an immediate threat. An update is scheduled for the next update cycle following a full review and thorough testing.
codefresh/runtime-env ironment-manager <i>Published on:</i> March 28 2024	CVE-2020-36604	3.33.2	Risk assessment confirms Hoek vulnerability which is unused and does not pose an immediate threat. An update is scheduled for the next update cycle following a full review and thorough testing.
codefresh/tasker-kubernetes <i>Published on:</i> March 24 2024	CVE-2020-36604	1.25.2	Risk assessment confirms Hoek vulnerability which is unused and does not pose an immediate threat. An update is scheduled for the next update cycle following a full review and thorough testing.

On-premises v2.2.5 CVE Mitigations

Version 2.2.5			
Image	CVE ID	Image Version	Mitigation
codefresh/argo-hub-platform <i>Published on:</i> <i>Jan 31 2024</i>	CVE-2022-2564	0.1.8	The application is safeguarded against Prototype Pollution in Mongoose, as it enforces request payload validation and does not pass any additional, potentially harmful data into Mongoose methods. This security measure prevents attackers from injecting malicious changes to the application's object prototypes.
codefresh/argo-platform-abac <i>Published on:</i> <i>Jan 31 2024</i>	CVE-2023-26108	1.2527.0	The identified vulnerability is associated with the StreamableFile API. Codefresh does not utilize the StreamableFile API for returning files. Additionally, we do not allow downloading of files from our services.
codefresh/argo-platform-abac <i>Last updated on:</i> <i>Jan 31 2024</i>	CVE-2023-3696	1.2527.0	The application is safeguarded against Prototype Pollution in Mongoose, as it enforces request payload validation and does not pass any additional, potentially harmful data into Mongoose methods. This security measure prevents attackers from injecting malicious changes to the application's object prototypes.
codefresh/argo-platform-analytics-reporter <i>Published on:</i> <i>Jan 31 2024</i>	CVE-2023-3696	1.2527.0	The application is safeguarded against Prototype Pollution in Mongoose, as it enforces request payload validation and does not pass any additional, potentially harmful data into Mongoose methods. This security measure prevents attackers from injecting malicious changes to the application's object prototypes.
codefresh/argo-platform-analytics-reporter <i>Published on:</i> <i>Jan 31 2024</i>	CVE-2023-26108	1.2527.0	The identified vulnerability is associated with the StreamableFile API. Codefresh does not utilize the StreamableFile API for returning files. Additionally, we do not allow downloading of files from our services.

Version 2.2.5

Image	CVE ID	Image Version	Mitigation
codefresh/argo-platform-event-handler <i>Published on: Jan 31 2024</i>	CVE-2023-3696	1.2527.0	The application is safeguarded against Prototype Pollution in Mongoose, as it enforces request payload validation and does not pass any additional, potentially harmful data into Mongoose methods. This security measure prevents attackers from injecting malicious changes to the application's object prototypes.
codefresh/cf-api <i>Published on: Jan 31 2024</i>	CVE-2021-3377	21.234.11	The attacker cannot inject an XSS vulnerability into the logs due to our input validation. The only possible avenue for such an attack is to invoke an external service through a Codefresh step in the pipeline, which could potentially introduce HTML content into the logs. However, even in this scenario, Codefresh utilizes this library exclusively when a customer attempts to download logs in HTML format. This is distinct from the Codefresh logs viewer and is unrelated to it.
codefresh/cf-api <i>Published on: Jan 31 2024</i>	CVE-2020-36604	21.234.11	Risk assessment confirms Hoek vulnerability which is unused and does not pose an immediate threat. An update is scheduled for the next update cycle following a full review and thorough testing.
codefresh/cf-platform-analytics <i>Published on: Jan 31 2024</i>	CVE-2020-36604	0.49.20	Risk assessment confirms Hoek vulnerability which is unused and does not pose an immediate threat. An update is scheduled for the next update cycle following a full review and thorough testing.
codefresh/cf-platform-analytics <i>Published on: Jan 31 2024</i>	CVE-2023-50709	0.49.20	Codefresh does not directly expose Cube API to the internet. We use a separate express.js server that uses the logic from cube.js to process the requests.

Version 2.2.5
